Thompson Building Materials*

Square Feet of Masonry

*7,000 Sq Ft Flagstone Paving
6,000 Sq Ft Stone Veneer
2,000 Sq Ft River Rock*

Number of Stories 1

One of the biggest challenges of remodeling an existing upscale rustic facility is matching existing materials. The Reserve Club expansion in Indian Wells was no exception.

With careful planning and a diligent search, the contractor was able to match three natural materials, Flagstone, Natural Stone and River Rock. Once procured, materials for the renovation were seamlessly installed so that the expansion did not appear as an addition, but as part of the existing facility.

Concrete Masonry Units (CMU) provide the structural framework of the expansion with natural stone and river rock installed as veneer over the CMU. The natural stone material on both the existing and expansion provide the pleasing aesthetics that integrate into the surrounding environment.

Construction by a signatory masonry contractor using members of Bricklayers & Allied Craftsmen Union Locals
