## STARBUCKS – FULLERTON TOWERS FULLERTON, CALIFORNIA

### Owner

*Birtcher Anderson Realty Management  
Fullerton, CA*

The architectural elements for this Starbucks were coordinated to provide the scale and stature of a high traffic public facility on a highly visible intersection, complementing the Fullerton Towers office complex.

### Architect

*Architects Orange  
Orange, CA*

Starbucks building is organized and articulated through facade recesses, architectural steel columns, oval canopy and a pallet of coordinated field and accent concrete masonry units (CMU) textures and colors to aesthetically blend with the existing Fullerton Towers. Balance had to be considered with the natural hues of the exterior materials, including the aluminum storefront, white CMU walls and slate-colored precast projected CMU walls.

### Structural Engineering Firm

*AES Consulting Engineers*

Shadows, block orientation and texture absorbs and reflects light differently, thereby giving each wall and space a visual richness that evolves throughout the day.

### General Contractor

*CM Corp  
Laguna Hills, CA*

The intriguing projected block pattern character and identity of the facility is a magnetic point and an ideal addition to the Fullerton Towers.

### Masonry Producer/Supplier

*Angelus Block Company, Inc.*
