As the new primary entrance to the UCLA Anderson campus, the Marion Anderson Hall will serve as both a symbolic and functional gateway to the school.

Design of the four-story building incorporates extensive use of brick masonry veneer and glass panels, which provides distinctive character and resulted in a successful and attractive facility.

Brick veneer is complemented by precast bands, which highlight the color blend of the clay brick, combined with painted aluminum and glass in a lively composition that connects fluidly with the existing Anderson School complex. This combination of durable masonry integrates well with the campus architecture while contributing to LEED Platinum rating.

The location and exterior façade provide a continuous extension of the original buildings, resulting in the perfect blend of the desired function with a matching aesthetic.

Construction by a signatory masonry contractor using members of Bricklayers & Allied Craftsmen Union Locals
