Structural Engineering Firm

*John A. Martin & Associates
Los Angeles, CA*

General Contractor

*ASR Constructors, Inc.
Riverside, CA*

Masonry Producer/Supplier

*ORCO Block & Hardscape
Riverside, CA*

The masonry colors and textures for the Barstow College Performing Arts Center were selected to blend and match with the existing campus character that reflects the site's surrounding environment.

Concrete masonry units (CMU) can be a very adaptable and rewarding material when color and texture are used creatively, and it is both affordable and sustainable. The energy-efficient masonry design incorporates a structural red tone CMU. The horizontal accent band at every 12th course provides a linear interruption and a contemporary color contrast of CMU which creates an aesthetically pleasing facade.

CMU as the main exterior skin of the building creates an energy efficient interface with the elements which were extended with eco-friendly landscaping.

Concrete masonry, with its unmatched qualities, excellent performance, and durability, is the perfect material for this LEED Silver rated college structure.
