Woodbridge High School's new Performing Arts Center is located in a prominent corner of the Irvine Community and is an excellent example of the inventive architectural expression and design creativity offered by masonry.

The captivating design was structurally challenging and very distinctive, providing an attractive visual impact in the surrounding neighborhood. The combination of colors and textured concrete masonry blocks provide variety and artistic personality to the Performing Arts Center.

Shadows, block orientation and texture, absorb and reflect light differently, thereby giving the masonry walls and space a visible richness that evolves throughout the day.

The projected pattern of earth-tone precision and burnished block provides a focal point for the art center and is an ideal addition to the Woodbridge High School.

Construction by a signatory masonry contractor using members of Bricklayers & Allied Craftsmen Union Locals
